Education

Indian Institute of Information Technology, Nagpur

Nov 2022 – May 2026

Bachelor of Technology in Computer Science and Engineering

CGPA: 9.44 / 10

Experience

Habuild

Jun 2026 – Present

Software Development Engineer – I

Bengaluru, India

- Led production RCA and hardening of a FastAPI engagement service serving **~18M requests/week**, pooling and timeout-bounding every httpx, asyncpg, and Redis client and fixing two connection leaks; cutting **p95 latency 45%** (209ms to 115ms), **CPU 55%**, and **peak memory 71%**.
- Built a screenshot-based payment-verification flow for a production AI support agent (Beetu) using GPT-4.1 vision to read receipts, with a three-tier Razorpay/UTR verification ladder and fail-closed validation gates; handled **1,520 payment interactions in the first 15 hours**, auto-confirming **312** with zero human involvement and **zero errors**, replacing a manual CRM process.
- Diagnosed and fixed a slow production endpoint, reducing load time from **~17s to ~300ms**, and removed redundant front-end API calls using debouncing and lazy loading, improving the internal team's daily workflow.
- Contributing to the migration of Habuild's production AI platform toward a distributed multi-agent architecture using **LangGraph, AWS SQS, Redis, Qdrant, and Langfuse**, with supervisor-driven routing, agentic tool execution, memory, and asynchronous workers.
- Introduced **DNS SRV-based service discovery** for service calls, eliminating external exposure of microservices.

Habuild

Jun 2025 – Nov 2025

Engineering Intern

Nagpur, India

- Developed a RAG-based proof of concept for query resolution using semantic and hybrid search over a curated knowledge base, achieving **95% response accuracy** and reducing expert workload by **80%**.
- Optimized Docker builds, cutting image size from **3000MB to 220MB** and build time from **9 min to 2.5 min**.

BillTrackr | billtrackr.in

Feb 2026 – Jun 2026

Software Engineer (Independent)

India

- Engineered a B2B SaaS platform replacing error-prone Excel and manual billing workflows for civil engineering consultancies; **onboarded 3 clients** managing **800+ projects** and **150+ invoices/month**, reducing bill update and generation time from **~55 minutes to under 7 minutes**.
- Built real-time analytics dashboards and automated invoice generation with concurrency-safe sequencing and PDF/Excel exports, enabling project-level financial tracking while ensuring reliable billing under concurrent workloads.
- Architected a secure multi-tenant backend with strict data isolation and role-based access control; implemented tiered subscriptions with real-time feature gating and automated lifecycle management.

Technical Skills

Languages: C/C++, Go, Python, TypeScript, JavaScript, Java, SQL

AI/LLM: LangGraph, LangChain, RAG, Langfuse

Frameworks & Libraries: Node.js, NestJS, Express, FastAPI, React.js, Prisma, Jest

Databases: PostgreSQL, MongoDB, Redis, Qdrant, Firebase

Cloud & DevOps: AWS (ECS, SQS, EventBridge, Lambda, S3, CloudMap), GCP (BigQuery), Docker, Git

Achievements

- Achieved **Specialist** rating (1400+) on [Codeforces](https://www.codeforces.com/) and **3 Star** rating (1700+) on [CodeChef](https://www.codechef.com/).
- Secured **5th place** out of 250+ teams at HEREvolution Hackathon, APOGEE'24, BITS Pilani.
- Secured **5th place** out of 100+ teams at Genathon, Tantrafiesta'24, IIIT Nagpur.

Positions of Responsibility

Club Co-Lead, Estoria – Drama and Poetry Club, IIITN

Aug 2023 – Jul 2024

- Organized year-round club events and led execution of three major events at the cultural fest, attracting **5,000+ attendees** and ensuring smooth operations with high audience engagement.
